Trials still maturing

Program funnel

Ambassador links point at the standard 14 day free trial rather than a discounted checkout, so no checkout event is generated by design. The outcome that matters is a subscription activated after the trial, and that is tracked outside the landing page analytics shown here.

Leaderboard

the 10 ambassadors with tracked activity

#	AMBASSADOR	BRAND	CODE	LEADS		LAST ACTIVITY
1	Jack Lucas	Both	7XI1R1	8		Sep 11
2	Chris Navin	Both	TD2L3T	6		Sep 8
3	Francisco Madrigal	TriDot	UKKEU8	4		Aug 17
4	Dawn Winterhalt	TriDot	MBCEC	2		Sep 8
5	Marisa Fortin	TriDot	3VYL3	2		Sep 3
6	Julie Malloy	RunDot	P9XREE	1		Sep 8
7	Nuno Aguiar	RunDot	DNFCZJ	1		Sep 13
8	Jérôme Streiff	TriDot	LQMVC2	1		Aug 17
9	Lindsay Pappas	TriDot	HWEYQA	1		Aug 17
10	Walter Cahall	Not set	4V1DI1	1		Aug 20

How this program is measured and why checkout data does not apply

Ambassador links are standard 14 day trial links

They do not carry a discounted checkout offer, so the landing page analytics used for this report record an email capture and stop there. No checkout event is expected, and the absence of one is not a performance signal.

The success measure for the Ambassador Challenge is a subscription activated after the free trial. That requires joining referral source to trial and subscription records, which is a separate pull from the analytics shown here.

Maturity, and what can be said today

Trials need 14 days to resolve, and the most recent ambassador activity is dated September 13. Only the earlier leads have had time to convert, so any activation rate calculated now would understate the program.

What is measurable today is reach and participation: 58 links issued, 10 ambassadors sharing, 24 leads captured. Those figures are complete and verified.

What needs attention

Eighty three percent of the roster has never shared

Forty eight ambassadors hold a working link and have produced nothing. Most indicated on the sign up form that they intended to post on Instagram, Facebook, and Strava. The gap is activation and reminder, not recruitment. Three people account for 18 of the 24 leads, and Jack Lucas generated six of his eight on a single day.

Activation reporting is not yet wired up

Referral source is tracked at the landing page, but connecting it through to trial starts and paid subscriptions requires a separate join against user records. Until that exists, the program can be reported on reach and leads but not on revenue outcome.

Recommended next steps

1. **Build the trial to activation view by referral source.** Join referral code to trial starts and subsequent paid subscriptions so the leaderboard can rank on activations rather than email captures.
2. **Look up the 24 captured leads in LevelField user records.** Confirm how many started a trial, and how many of the matured trials converted.
3. **Run an activation push to the 48 inactive ambassadors.** Resend the link with ready made copy and images. A single reminder against a group this size is the cheapest available lift.
4. **Study what the highest volume sharers do differently.** Jack Lucas, Chris Navin, and Francisco Madrigal produced 18 of 24 leads. Whatever their placement and messaging looks like is the template worth giving the rest of the roster.

Prepared from LevelField promotions analytics with all filters cleared, joined to the Ambassador Challenge sign up form by referral code. All 58 issued codes matched the tracking system.

Landing page events are visits that produced a tracked outcome. Views without an outcome are not counted. This report measures landing page reach and lead capture only. Ambassador links route to the standard 14 day free trial, so checkout events do not apply.

Trial starts and paid subscriptions attributable to ambassadors are tracked separately and are not included here.
